STAINLESS STEEL ROUND AND SQUARE BASE ASSEMBLY INSTRUCTIONS

ATTENTION: Due to the dent and scratch sensitive nature of the stainless steel material, use extreme care when assembling the base.

Components needed for assembly:

(1) Mounting Plate

(1) Round or Square Floor Plate

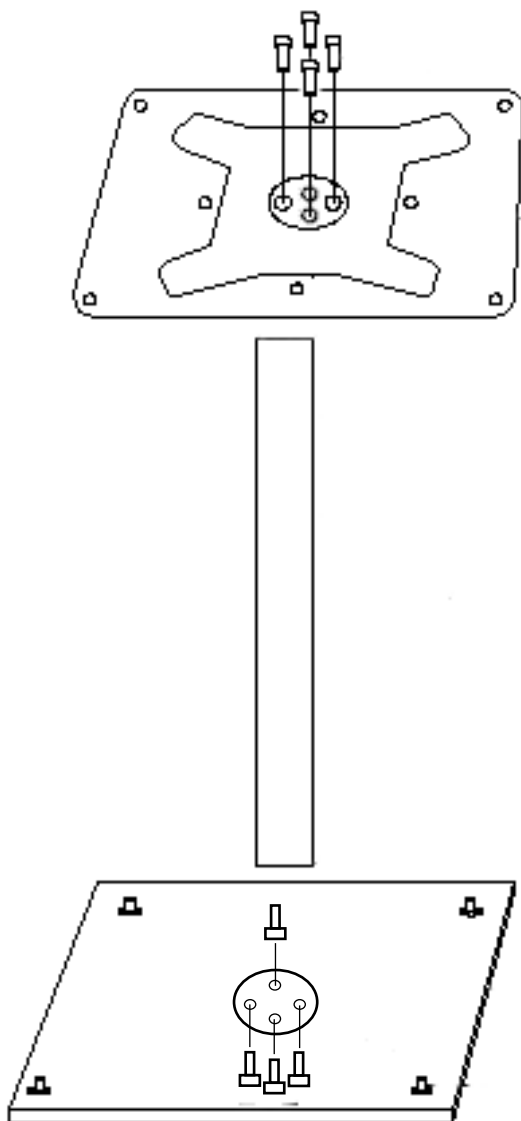

(1) Vertical Column

(1) Wrench

(8) Allen Head Bolts

Instructions

You will need 2 people to assemble the base.

1. Cover the work area with a soft blanket or carpet. ***If a column has a deeper opening on one end, that end connects to the mounting plate. The shallow end connects to the floor plate.*** Set the column on the floor with the shallow end on top. With one person holding the column, gently set the center of the floor plate on the column. Use (4) Allen head bolts to attach the plate. Tighten the bolts with the wrench.
2. Turn the base over and gently set the floor plate on the floor with the top of the column pointing upward.
3. Place mounting plate on the column. Start the remaining (4) Allen head bolts by hand first, then tighten with the wrench.
4. After attaching table top to the base, adjust the glides to level your table.
5. Use stainless steel cleaner and soft cloth (not provided) to remove finger prints or stains from the base.
